What we do at BlueVoyant

CYBER RISK MANAGEMENT SERVICE FOR INVESTORS

We **DON'T** just tell you the cyber risk of your investment portfolio.

We **DO** tell you and your companies **WHAT** to do about it and **HOW**.

Then, we tell you **WHEN IT IS DONE**.

"Cyber attackers constantly look for vulnerable companies. Some of our companies may well be vulnerable to current or new attacks without the resources to protect themselves. We need assistance to continuously monitor, eliminate false positives, recommend specific high-impact remediations, and track implementation."

HOW CYBER RISK MANAGEMENT WORKS

Step 1

Continuous curation of external cyber risk score

The cyber experts in our 24x7 Risk Operations Center (ROC) curate cyber risk scores on all your companies, all the time.

They leverage our automated playbooks to reduce false positives - e.g., guest networks, security devices.

Step 2

Critical remediation actions identified

Severity ↓	Summary
Critical	Evidence of outbound request to an exploit domain
Medium	DKIM Record is too short
Low	Evidence of Inbound Botnet Activity targeted

Our ROC uses automation to identify the handful of remediation actions needed for each company exceeding the risk threshold set in our onboarding process.

Step 3

Actionable remediation steps sent

These remediations are tracked in our portal and available to you and your companies.

You can forward recommendations to your companies or we can act for you.

Step 4

Remediation status tracked and follow-ups as needed

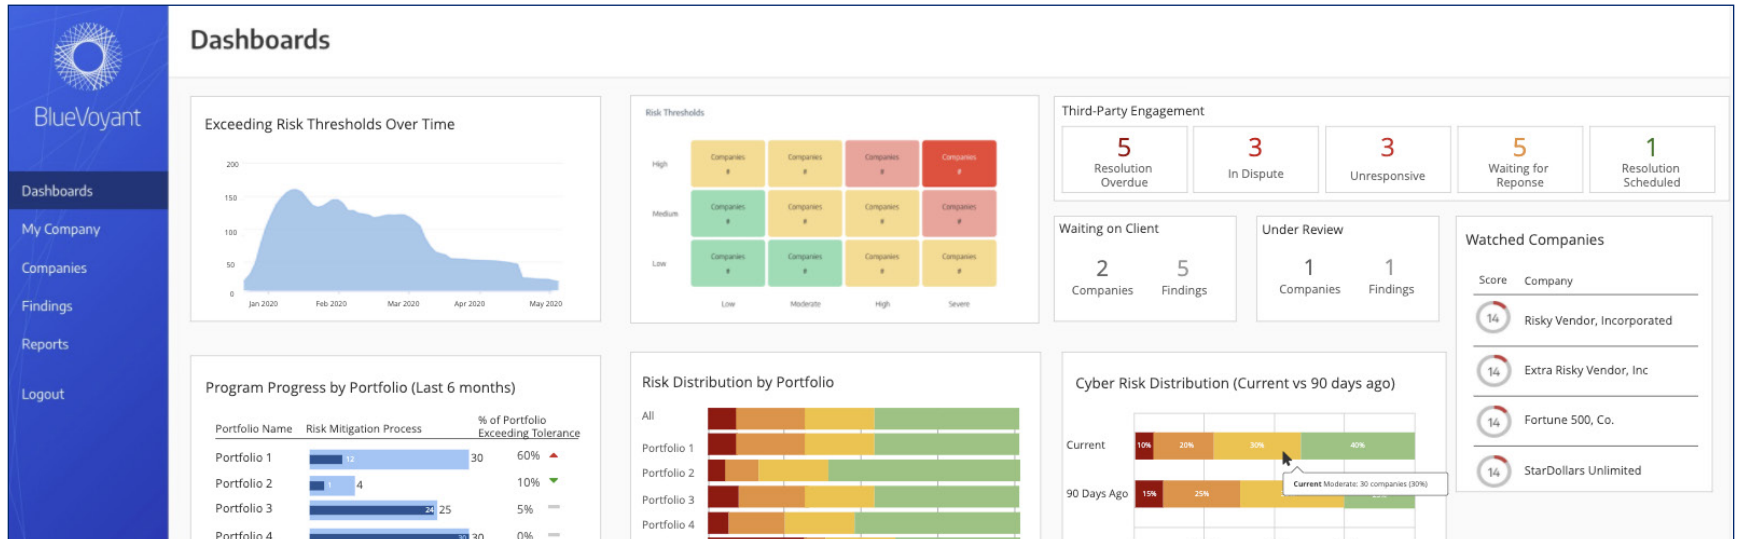

Our ROC tracks remediations and risk scores updated daily.

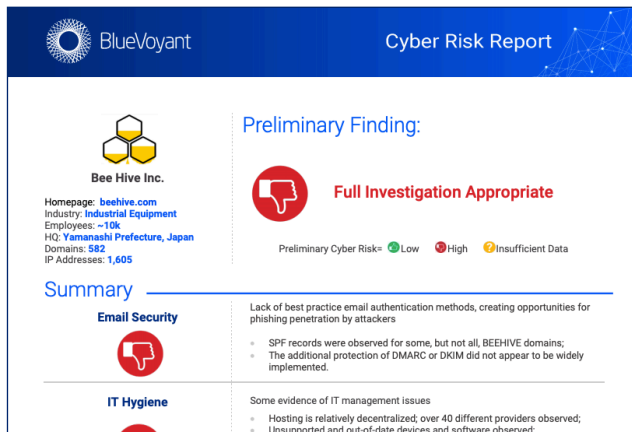

Status of each company's response identified and continuously available.

INSTANT VISIBILITY OF YOUR CYBER RISK

WHY OUR APPROACH DELIVERS RESULTS

1 Focus on **Effective Action**, not just Reporting

- We focus on companies with excessive risk and specifically recommend critical remediations

2 **Expert 24/7 Leverage** to your team enabling effective coverage of your investment portfolio

3 **Automation Assisted Expertise** is key

- A Risk Operation Center led by highly trained former cyber offensive personnel
- Leverages millions of dollars in security alert processing technology

4 **Exclusive Data Sets**

- Processing millions of data elements a second in near real-time
